Outcomes of FDP:

The participants of FDP are able to understand about

- ❖ Students gain the knowledge about MOSFET / CMOS operation and CMOS process flow.
- ❖ Students gain the knowledge of transistor sizing, logical effort and combinational logic.
- ❖ Students learn the design concepts with sequential logic.
- ❖ Students learn the issues related with the static timing analysis and clock distribution.
- ❖ Students become aware of concepts of memory design and interconnect delay.
- ❖ Students gain the knowledge about Layout design. DIGITAL VLSI CIRCUITS
- ❖ Students learn to realize Digital VLSI circuits using Verilog HDL in FPGA and ASIC based EDA tools.

OUTCOMES OF FDP

The participants of FDP are able to understand about

- ❖ Reduced carbon emissions: Using renewable energy sources helps reduce carbon emissions, which contribute to climate change and air pollution.
- ❖ Energy security: Diversifying energy sources with renewables can enhance energy security by reducing dependence on imported fossil fuels.
- ❖ Economic benefits
- ❖ Energy independence
- ❖ Environmental protection.
- ❖ Public health benefits: By reducing air and water pollution
- ❖ Resilience to climate change.
- ❖ Innovation and technology development.

Objectives of FDP:

- ❖ Introduction to Total Station
- ❖ Leveling and Centering of Total Station
- ❖ Distance, angle, level and coordinate Measurements
- ❖ Station setup methods – Angle, Co-ordinate, Resection method.
- ❖ Area Calculation.
- ❖ Remote Elevation Measurements.

About FDP Program:

Total station is an electronic/optical instrument used in modern surveying and building construction which uses electronic transit theodolite in conjunction with electronic distance meter (EDM). It is also integrated with microprocessor, electronic data collector and storage system.

The instrument is used to measure sloping distance of object, horizontal angles and vertical angles to the instrument. Microprocessor in the instrument use

the data This program will be helpful for the students and faculty members from the civil engineering stream and also for the faculty members of other streams who are interested in modern surveying collected to further calculate the horizontal distance, coordinates of a point and reduced level of the point.

Data collected from total station can be downloaded into computer/laptops for further processing of information. Total stations are mainly used by land surveyors and civil engineers, either to record features as in topographic surveying or to set out features (such as roads, houses or boundaries). They are also used by archaeologists to record excavations and by police, crime scene investigators, private accident Re constructionist and insurance companies to take measurements of scenes.

This program will be helpful for the students and faculty members from the civil engineering stream and also for the faculty members of other streams who are interested in modern surveying

Program Outcome:

- Use total station in the field of civil engineering land survey
- Summarize the basic principles of GPS and GIS in civil engineering.
- Manage the suggested or identified constructional problems, solve in teams, in order to improve future problem solving ability and able to present it.
