LED LIGHTS

LED lights pose a distinct environmental advantage over compact fluorescent (CFL) lights. CFLs contain traces of mercury. Cumulative amounts are known to be harmful to the environment. CFLs are not RoHs compliant and must be disposed of as a hazardous substance in most countries. LEDs contain no mercury or any other hazardous material and may be tossed in the trash or recycled after use.

Electricity consumption correlates with CO2 emissions. As LED lights use about half the energy of CFLs, CO2 emissions associated with LED use are cut in half. LEDs consume less power and last quite a bit longer. The 60W incandescent light bulb is fading into history and the compact fluorescent may soon follow. A 6W LED light produces about 806 lumens – the same intensity of light as a 60W incandescent or a 18W fluorescent bulb. But the LED light does not require 110 VAC, just 3-12 VDC and only 6W maximum of power.

Street LED lights with Solar Panel
